Stat v3.5
for PeopleSoft 8

A PeopleSoft 8 certified software integration.

Delivers both change management and version control.

Increases productivity and reduces overall cost of ownership.

Stat delivers a comprehensive change management/version control solution to encompass both PeopleSoft objects and flat files for your PeopleSoft applications. With Stat's seamless solution, it's no longer necessary to use a variety of applications and manual processes to manage development activities from initiation through deployment.

Quest Software, Inc.

Quest Software, Inc. is a leading provider of performance management solutions designed to maintain the integrity of mission-critical business transactions and maximize the performance of enterprise applications. Our solutions address the needs of today's 24x7x365 businesses where demands on the information technology infrastructure are high and tolerance for downtime is low. The internet has propagated the expectation of instant access to information, and Quest delivers the solutions necessary to meet this demand. Founded in 1987, Quest Software now helps more than 100,000 users achieve the best possible performance from their enterprise systems so the end user experience is a positive one.

Integration Overview

Stat provides project team members the ability to successfully manage the evolution of their PeopleSoft applications, from initial implementation throughout ongoing enhancements and upgrades. This is accomplished through the PeopleSoft exclusive object/file locking, version control, and migration management functionality. The Stat database becomes the knowledge repository for all enhancement, upgrade, or issue resolution information. Stat also enables teams to manage complex projects from one central location regardless of where team members are located. A Stat project is an easy way to assemble and track a variety of activities for an implementation, enhancement, or upgrade projects. This is essential when a project encompasses multiple phases, requires a variety of resources, and includes people from multiple groups or business units.

Stat uses a PeopleSoft-delivered CLI, so the integration between Stat and PeopleSoft is non-intrusive and non-destructive.

- **Object locking.** Stat expedites the development cycle by coordinating development activities for PeopleSoft objects and flat files across all databases with its exclusive locking/reservation capabilities. During the development life cycle, you can lock PeopleSoft objects across all designated PeopleSoft databases to prevent development conflicts and overwrites.

- **Version control.** You can version and store indefinitely all versions of PeopleSoft objects and flat files, enabling development to proceed without the risk of overwrites and lost changes. At any time, you can easily recover or "roll back" deleted or modified objects/files to a

PeopleSoft. | QUEST SOFTWARE

prior version. Recovery is even possible if the object/file no longer exists in the PeopleSoft environment.

- **Migration management.** Stat manages the automatic migration of objects and flat files across the development and production environments while creating a realtime, permanent audit trail that includes who performed the migration, the source and target databases, date and time, and the objects/files migrated. Stat's distribution databases feature also provides an automatic "one-to-many" migration option for companies that need to distribute changes/updates to multiple databases and file servers.

Availability

Stat v3.5 is available from Quest Software. Call Quest at 800 306 9329 or email info@quest.com for further information.

Support

Stat is fully supported by Quest Software.

Certification Environment

Software: PeopleSoft 8

Partner product: Stat v3.5

Operating systems: NT4, AIX 4.3

Database platforms: Oracle 8

PeopleSoft Certified Software Integrations

When PeopleSoft conducts certification testing, we verify only that the software integration functions according to the partner's test plan, and that it makes appropriate use of PeopleSoft components and integration technologies in the environment specified in the published Certification Datasheet. Certification applies only to the components providing integration between the partner's software and PeopleSoft software; it does not apply to or extend to the partner's software product(s). Certification is performed in a lab environment using uncustomized versions of PeopleSoft and the partner's software. Certification testing is product version specific, hardware specific, database specific, and operating system specific, and is conducted in English, unless explicitly noted otherwise. Similar results may not be able to be duplicated in a production environment, including where the PeopleSoft or partner software is modified or customized upon implementation. Customers are solely responsible for the selection of all third-party software, including any integration software, used in conjunction with PeopleSoft software and for the results of such use. For the functional and environmental details on a certified integration, refer to the partner's Certification Datasheet, found in the Alliances section of the PeopleSoft website at www.peoplesoft.com.
